BBIM502 - Week 13 Quiz

File Writing Methods, Backup Operations, and Comments

Student Name:	
Date:	

Instructions: Choose or highlight the best answer for each question. This activity is designed to check your understanding after the lesson.

Please submit your answers on Canvas by 11:59 pm, Tuesday 20 October.

Question 1: What is the purpose of file writing in Python?

A. To delete all files from the computer

B. To save data permanently to disk

C. To only display data on the screen

D. To stop a program from running

Question 2: Which file mode is used to overwrite existing content in a file?

A. 'a'

B. 'r'

C. 'w'

D. 'x'

Question 3: What happens when a file is opened using 'w' mode?

A. New data is added to the end of the file

B. The existing content is kept

C. The file is opened without any changes

D. The existing content is cleared before writing new data

Question 4: Which file mode should be used when you want to add new content to the end of a file?

A. 'w'

B. 'a'

C. 'r'

D. 'd'

Question 5: When should we use append mode 'a'?

A. When we want to delete old data

B. When we only need the latest result

C. When we want to track history, such as logs

D. When we want to close the program

Question 6: Why is creating a backup before writing useful?

A. It makes the program run slower

B. It preserves the original file content

C. It removes all old data permanently

D. It stops the file from opening

Question 7: What is the correct order for creating a backup before overwriting a file?

A. Write new data, read old content, then delete backup

B. Read old content, write old content to backup, then write new data

C. Delete old content, close program, then create file

D. Write backup, delete original file, then stop program

Question 8: When should backup be used?

A. When overwriting important data

B. When the data is not important

C. Only when printing output

D. Only when using comments

Question 9: What is the purpose of comments in programming?

A. To make the code harder to read

B. To explain the code and make it easier to understand

C. To replace all Python code

D. To create a backup file automatically

Question 10: What information is usually included in a header comment?

A. File name, author's name, description, and date

B. Only the file size

C. Only the computer name

D. Only the output result
